

### 225 Watts

- Low 1.18" Profile U Channel Construction
- -40 °C to +70 °C Operation
- 3.12" by 5.0" Footprint
- 150 W Convection/ 225 W Forced Cooled Ratings
- Optional 5 V Standby and Remote On/Off
- 12 V Fan Output
- Medical and ITE Approvals
- High Efficiency, up to 95%
- Less than 0.5 W No Load Input Power

#### Dimensions:

**UCP225:**  
5.00 x 3.12 x 1.18" (127.0 x 79.2 x 29.2 mm)

The UCP225 series is designed to minimize the no load power consumption and maximize efficiency to facilitate equipment design to meet the latest environmental legislation. Approved for medical and ITE applications, this range of single output AC/DC power supplies are packaged in an ultra-low profile 1.18" height with a foot print of just 3.12" by 5.0". The UCP225 provides up to 225 W force-

cooled or 150 W convection-cooled leading to very high power densities of 12.2 W/in<sup>3</sup> or 8.1 W/in<sup>3</sup> respectively. A 12 V, 500 mA fan supply is included in the design which can also be delivered with an optional 5 V/2 A standby output. The power supply contains two fuses and low leakage currents as required by medical applications and is safety approved to operate in a 70 °C ambient. The low profile and safety approvals covering ITE and medical standards along with conducted emissions to EN55011/22 level B allow the versatile UCP225 series to be used in a vast range of applications.

### Notes

1. Requires 10 CFM or optional top fan cover, -TF
2. Minimum average efficiencies measured at 25%, 50%, 75% & 100% of 225 W load and 230 VAC input
3. Add suffix -T for input and output screw terminals e.g. UCP225PS24-T
4. Add suffix -TF for fan cover version e.g. UCP225PS24-TF
5. Add suffix -C for vented cover version e.g. UCP225PS24-C
6. Add suffix -A for optional 5 V, 2 A standby and remote on/off e.g. UCP225PS24-A
7. Typical voltage, actual regulated voltage will be in range of 10.5 V to 11.1V
8. Regulation of the fan output requires a minimum load of 10W on the main output.

### Thermal Considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow). See Mechanical Details for component locations.

| Temperature Measurements (At Maximum Ambient) |                    |
|---|--------------------|
| Component                                     | Max Temperature °C |
| TR1 Coil                                      | 110°C              |
| L4 Coil                                       | 120°C              |
| Q1 Body                                       | 120°C              |
| C2  | 105°C              |
| C51   | 105°C              |

### Service Life

The estimated service life of the UCP225 is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of a key capacitor with in the product when installed by the end application,

The graph below expresses the estimated lifetime of a given component temperature and assumes continuous operation at this temperature.
