Thermal considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using thermocouples placed on the hottest part of the component (out of direct air flow). See mechanical details for component locations.

Temperature measurements (at maximum ambient)	
Component	Max temperature °C
TR1 Coil	120°C
L4 Coil	120°C
C13	105°C
C52	105°C
C2	105°C
